

The icon is a stylized representation of a blockchain block, composed of a grid of black squares of varying sizes, with one square missing from the top right corner.

# D\_BLOCKCHAIN

# Blockchain / DLT Evolution

From digital Currency to „Enabler“ of autonomous Organizations

## Smart Payment

- Operational Implementation as **Bitcoin**
- Definitive, digital Identification of all Participants and Assets (Coins)

➤ **Minimization of Transaction Costs**

## Smart Process

- Programmable Blockchains via **Smart Contracts**
- Integration of automated Operations (e. g. Contract Handling) in Transactions

➤ **Automation of Contract Handling**

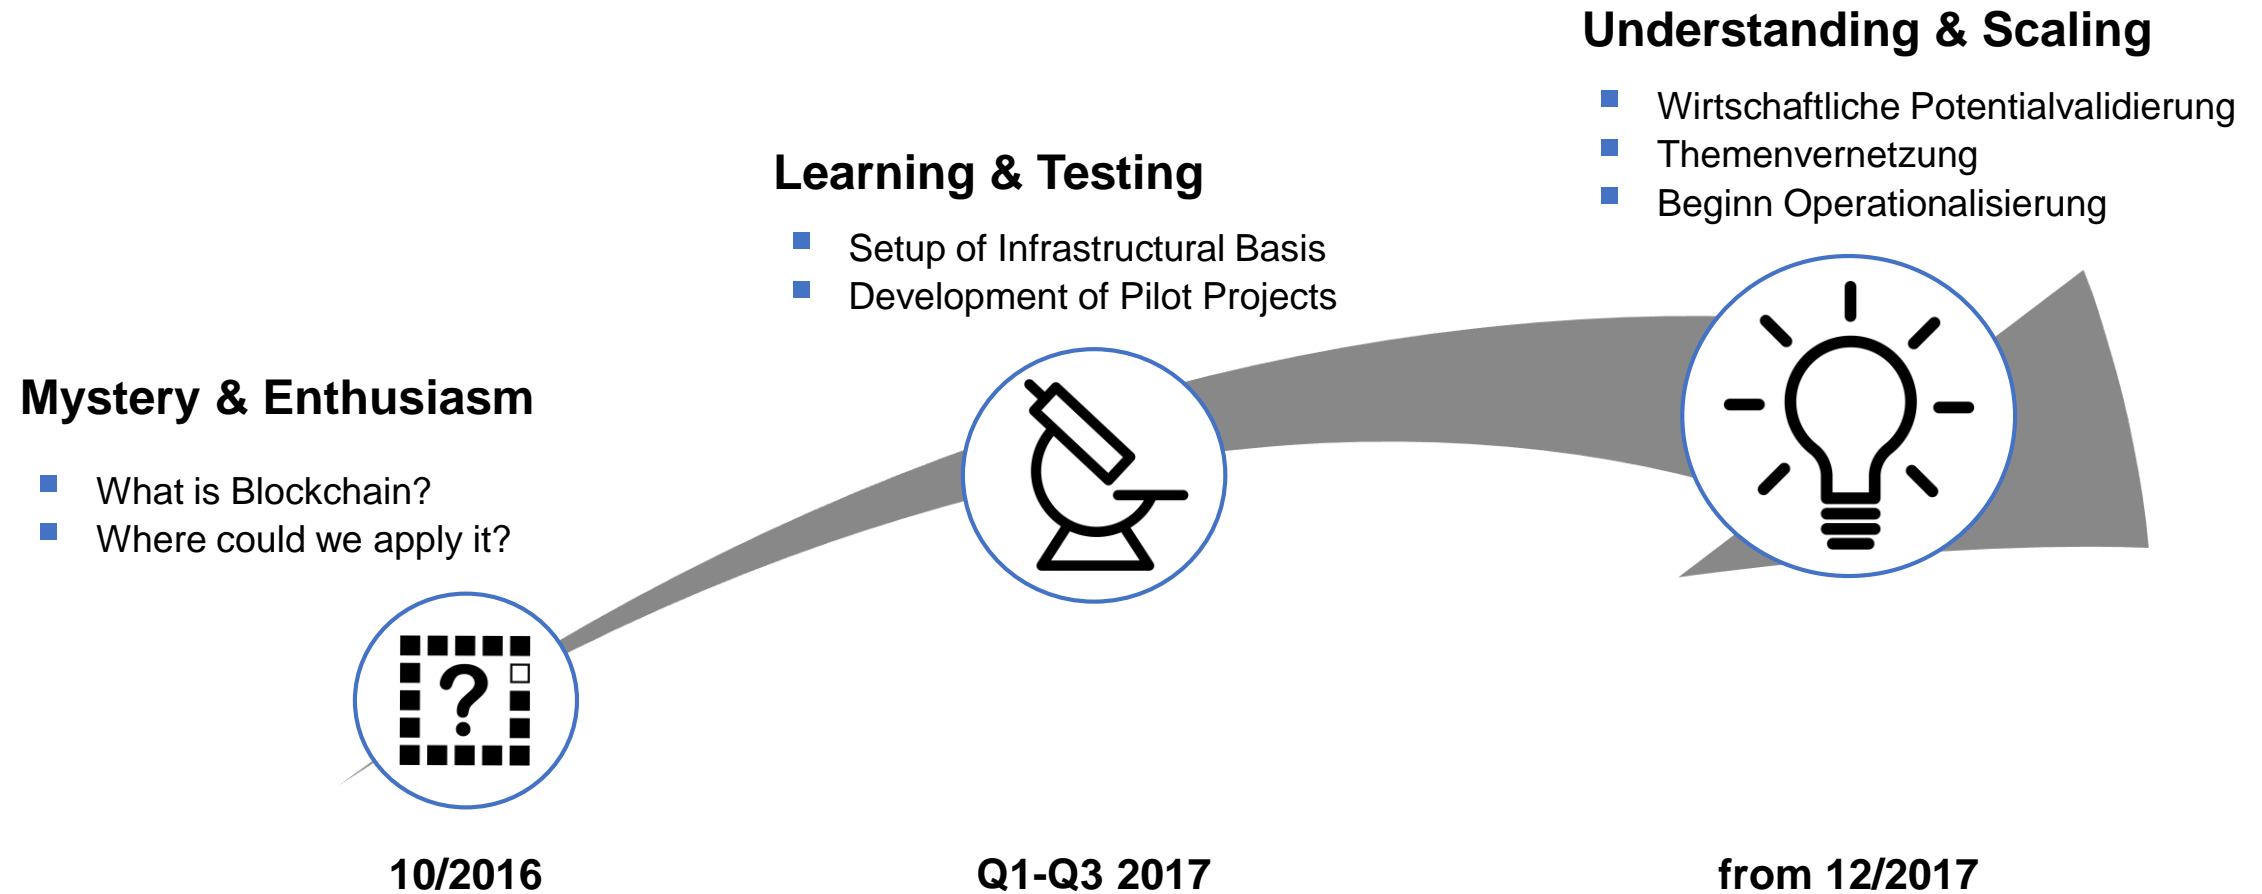

## Smart Organization

- Combining & Linking several Smart Contracts and Blockchains to form **Decentralized Autonomous Organizations**

➤ **Complete Elimination of Intermediaries**

# From Mystery to Application:

Evolution from “Mystery” to Live-Operation in a year at DB.

# Significance of Blockchain at DB

## Re-engineering: Potentials in 3 Levels

1

### Process

Implementation of Blockchain  
on **Existing Business Processes**

2

### Architecture

Revision of System and Process  
Landscape of **Existing Business Relationships**

3

### Business Model

New Logic for existing (and new)  
Business Models End-to-End

# Why should you collaborate with DB Systel on Blockchain Themes?

## More value gained from a collaboration

### ➤ **Already live!**

- Electricity Trading (12 Months live)
- CharityChain (3 Months live for Android und iOS public!)
- Intelligent Business Relations (Ramp-up)

### ➤ **Team!**

- Excellent Know-how and practical Experience, extensive Network
- Unflinching focus on getting results together, among others with ValueIT Blockchain Community

### ➤ **Scaling!**

- Startups (Faizod, Iota, etc.)
- Big-Player (IBM, R3, Microsoft, Fujitsu, etc.)
- Science (Hasso Plattner, Frankfurt School, BC Cluster, etc.)

### ➤ **Market Positioning!**

- Exploiting DB Systel's Positioning in Market<sup>1)</sup>
- Mutually enhanced Standing of both parties through Collaboration

# Blockchain & DLT Solutions

## Revenue Splitting und Ticketing Platform

# Asset- & Device-IDs enable M2M-Contracts & Value Transfer

## Secure Proof Of Identity

„Who and What am I?“  
incl. Possession of an own Wallet

## Electronical Signature

for recording contracts & control  
instruction, as well as Data Logs

**Machine as (Business) User Role**  
in Applications (e.g. SAP)

**Digital CV / Maintenance History**  
all Information (e.g. Depreciation,  
Maintenance Reports, Manufacturer &  
Insurance Info), smooth and accurate  
Transfer of Information in the case of  
Change in Ownership or Leasing

# Trusted Identity

Comprehensive Identity Framework for numerous application scenarios at DB

INTERNET OF  
EVERYTHING

## Mobility-ID

- **Customers need to have a single identity for the whole travel ecosystem**
- **Personal data such as credit card info** to be managed at a **single place**
- **Customers decide**, which information to provide
- **Retention of customers as DB customers**

## Persons/Employee-ID

- **Employee ID used as access rights to IT-Systems** and internal booking systems
- **Internal, validated resumes** with confirmed skills und competences
- Use in **Recruiting and Personnel Planning Systems** conceivable

## Asset- & Device-ID

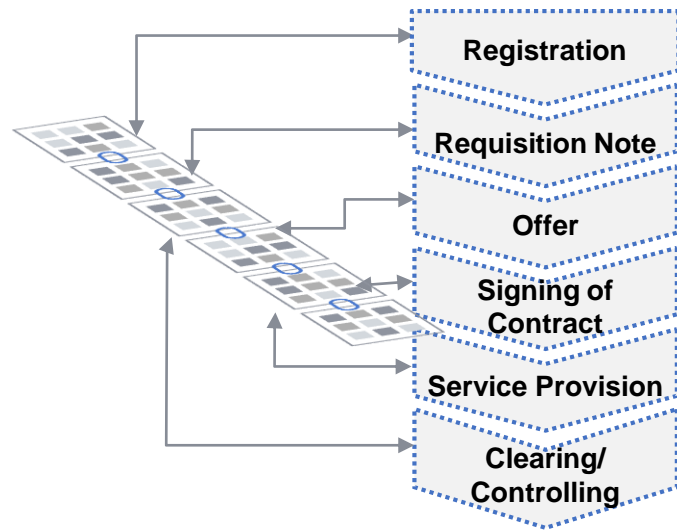

- Asset ID for **Signing Contracts between Things** (e.g. A train settles charges with a railway station)
- **Identification und Authorization of Sensors and Devices**

# Intelligent Business Relations

## Radical Process Modification and its Results

### Process

#### Transparency

- All participants have the same level of information
- Clear rules for Contract Negotiations and Preparations

### Roles

- Requisitioner
- Offer submitter & -authorizer
- Administrative authorizer
- Signer
- Project Manager
- Controller

#### Faster Processing

- Faster Processing through reduced number of Process Steps & increased Automation
- Real-time Information at all times for Decisions + Oversight

### Application

**Application connects all parties involved and provides oversight to actual Status**

#### Cost Reduction

- Fewer process steps
- Reduced time required for Controlling
- Increased running time

# Intelligent Business Relations

## Architecture of the Pilot consists of 3 Layers

### User Interface

### Backend

for Visualization, for Apps und Authentication

#### Energie

- Workflow Logic of Participants on the Process DB Energie
- Digital Files/Data (e. g. PDF's)

#### Systel

- Workflow Logic of Participants on the Process DB Systel
- Digital Files/Data (e. g. PDF's)

### Blockchain

Smart Contracts and „Business Rules“ on „Hyperledger“ Blockchain

- Business processes, business objects and definitions of roles on process
- Hash-Signatures of digital data about all participating business units and actors
- Amazon AWS Cloud (scalable)
